Kavya Gada

kavyagada20@gmail.com | +91 8591498371 | Linkedin | Github | LeetCode | HackerRank

Summary

AI/ML undergraduate with experience in RAG-based applications, agentic AI workflows, machine learning, and AI-powered software development. Skilled in Python, LangChain, LangGraph, LLM APIs, and vector databases, with strong foundations in DSA, OOP, DBMS, and SQL.

Education

BTech in Artificial Intelligence and Machine Learning Aug 2023 – Present
Dwarkadas J. Sanghvi College of Engineering — **CGPA: 7.552/10**

Experience

Software Engineer Intern – Binge Consulting Oct 2026 – Present

- Contributed to AI-driven projects, including LeadBridge, an automated lead generation and conversion platform, and LeadSign, a digital document signing platform, while conducting technical research to evaluate implementation approaches for business requirements.
- Developed and trained a YOLO-based person detection model for restaurant CCTV analytics and currently working on Google Ads API integration to support automated advertising workflows.

AI/ML Intern – Community Tree Jun 2026 – Sep 2026

- Developed a multilingual RAG-based AI chatbot with streaming responses, enabling natural-language search across 2 years of daily-published community newspaper archives through semantic retrieval.
- Built an automated multilingual data ingestion pipeline using Playwright and Gemini Vision OCR, incorporating text cleaning, classification, context-aware chunking, Gemini embeddings, ChromaDB vector storage, and reranking.
- Implemented document summarization to generate concise summaries of newspaper articles, improving accessibility to historical community information.
- Engineered an automated Event Calendar pipeline to extract, normalize, deduplicate, and enrich events from newspaper articles, with incremental SQLite updates and automated JSON publishing for a dynamic web calendar.
- Implemented event filtering, search, sorting, and dedicated event detail pages, enabling structured access to community events by date, location, organization, and category.

Projects

AI Job Application Agent [GitHub] | *Python, Flask, Groq API, Tavily API, Tailwind CSS* June to Sept 2026

- Developed a multi-agent AI system that calculates a 0–100% candidate-job match score, identifies skill gaps, and tailors resume bullets to target job descriptions using the STAR method.
- Generated personalized cover letters, recruiter emails, LinkedIn InMails, and STAR-based interview guides, with automated DOCX resume generation and one-click ZIP export.

AquaScan | *React, Node.js, Express, MongoDB, Python, YOLO, CV* Oct 2025 – Jun 2026

- Developed an AI-assisted aquatic waste reporting platform using computer vision to analyze pollution images and generate structured reports with location and metadata.
- Built authentication and role-based access for citizens and authorities, with user profiles, badges, report tracking, and cleanup management workflows.

Technical Skills

Languages: Python, C++, C, Java
AI/ML: Machine Learning, Text-Based Generative AI, LLM Applications, Prompt Engineering, RAG Pipelines, Agentic AI Systems, NLP, Semantic Search, Embeddings
Frameworks & Libraries: LangChain, LangGraph, Scikit-learn, NumPy, Pandas, Matplotlib, Hugging Face Transformers
Databases: MySQL, ChromaDB
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems
Developer Tools: Git, GitHub, Linux, Postman, VS Code, Jupyter Notebook, Google Colab

Achievements

- Solved 100+ problems across Data Structures, Algorithms, and SQL, strengthening problem-solving skills.
- Achieved 5-star SQL rating on HackerRank and completed the SQL 50 Study Plan on LeetCode.

Co-curricular Activities

- **Marketing Co-Committee Member – TEDx DJSCE:** Secured 6,000 Rs food stall and 160+ books sponsorship through outreach; built sponsor database using web scraping and executed bulk outreach efforts.
